

DelAgua Bacteriological Kits

DelAgua have developed an extended kit range. This range was originally developed for UNICEF and is now used in many countries around the world. All kits include either the Single or Dual DelAgua Incubator and offer extended testing across a number of ranges.

DelAgua Bacteriological Kits

The Bacteriological Test Kit No.1

The Bacteriological Test Kit No.1 is the most basic of all the Bacteriological Test Kit family. It includes the DelAgua Basic Single Incubator Kit with the addition of a portable digital Conductivity, Total Dissolved Solids (TDS), pH and Temperature meter.

The Bacteriological Test Kit No.2

The Bacteriological Test Kit No.2 is the most advanced DelAgua Kit, making it a complete portable water laboratory capable of testing over 70 parameters. It includes a Dual Incubator with the addition of a suite of other equipment to give accurate and wide testing capabilities.

Additional equipment provided includes a portable digital Conductivity, TDS, pH and Temperature Meter, a Portable Photometer (capable of testing 70+ parameters – reagents must be ordered separately). It also includes a digital portable turbidity meter for accurate turbidity measurement.

The Bacteriological Test Kit No.3

The Bacteriological Test Kit No.3 is designed for people with a broad chemical testing requirement that only need to test for either thermotolerant coliforms or total coliforms, but not both at the same time. It is identical to the Bacteriological Test Kit No.2 with the exception of including a single incubator unit rather than a dual. All bacteriological test kits can be adapted with additional items and reagents as required. In this way a user can “design” their required test regime exactly to their specifications and requirements without having to purchase unnecessary chemicals and reagents.
